

ROOM SERVICE

ELEGANCE

Flow fits perfectly with the décor in your home and stands compact and ready to use.

You will have access to every floor at any time.

When not in use, the arms, seat and foot rest of Flow all fold away very simply.

To maximize floor space at the top and bottom of your staircase, the Flow rail can be extended to park the lift around the corner, as can be seen from the photographs. All of these features combine to make Flow a discreet addition to your home.

VERSATILITY

The unique versatility of Flow helps you get on and off the chair. Flow is available with either a manual or automatic power swivel option.

Where staircase width is a challenge, the 'Advanced Ride Monitoring System' of the powered swivel feature turns the chair and footrest to travel past the narrowest staircase sections. This is an exclusive feature of Flow and ensures that Flow is flexible on staircases as narrow as 61cm.

EXCELLENCE

The Flow rail: Engineering & Design Excellence.
The Flow chair rides on a single rail system on either side of your staircase.

The rail has been specially designed to stay very close to the edge of your staircase to maximize free space, as can be seen in the main image. The rail is only 8cm in diameter and four rail colours are available to ensure a pleasing match to your décor.

The special 'drop nose' rail option is an added space saving feature if there should be an obstruction such as a door at the foot of your stairs. Whether the stairs have multiple landings or unusual shapes, Flow can be custom-crafted to fit virtually any staircase shape.

NEW FEATURES

Overcoming all obstacles:

It is often at the bottom of your staircase where most obstacles can occur that may impact the installation possibilities of a stairlift. The advanced, single piece, tubular design of the Flow rail has been designed to overcome all obstacles and avoid the need to fit an expensive powered folding style hinge rail at the bottom of your stairs.

Rail Option 1:

Standard Drop Nose

Flow's standard drop nose is the perfect solution if there is an obstruction such as a door near to the bottom of the stairs. The drop nose requires just 17.5cm of space from the first step.

Rail Option 2:

New Vertical 'Short Start' Drop Nose

Where space is even tighter at the bottom then the 'short start' drop nose can be installed, it only requires 10cm of space at the bottom.

Rail Option 3:

New Zero Protrusion Vertical Rail

Where there is zero available space for a rail at the bottom, Flow can be installed with a rail that finishes on the first step.

Rail Option 4:

180° Parking Curve

Flow is equally at home on the inside of the staircase which also enables a neat parking curve to be placed at the bottom of the stairs.

SPECIAL FEATURES

Choice of three, simple to use, arm mounted joysticks (as standard)
